Escrow: Let's get real world!

- 🧠 you now understand storage, value/data transfer between smart contracts
- 🎉 you can now produce useful solidity contracts!
- 📜 let's build an escrow agreement between 2 parties to transfer some value, arbitrated by a 3rd party

Let the world know! 📢

Emit an **event** when something important happens!

```
contract Escrow {  
    event Approved(uint);  
  
    function approve() external {  
        // ...  
    }  
}
```

```
        emit Approved(address(this).balance);  
    }  
}
```
